

AUG 2011

"We don't just bridge the gap, we help you Crossover!"

Sept 15-16, 2011 Canadian Wireless Tradeshow

Crossover Distribution is excited to announce they will be exhibiting at Canadian Wireless Tradeshow which will be held at the Toronto Congress Centre. Come visit us, along with our key Vendors — SAF Tehnika, Spotwave, Zinwave and Solectec — at Booth #118 to see what's new!

About CWTS

The Canadian Wireless Trade Show (CWTS) will revolutionize the wireless industry by bringing together industry professionals from across the globe giving the Canadian wireless industry the global exposure it deserves. CWTS will provide a platform for all those associated to the wireless industry to meet for a 2 day exhibition to share business expertise and network with one another.

The SpotCell Evolution Continues...

With the introduction of the SpotCell 1000, Spotwave again leads the market with breakthrough carrier compliant product solutions for the in building coverage requirements. The SpotCell 1000 is a unique, programmable, band specific indoor coverage solution for 1,000 to 10,000 square feet applications. With a broad diversity of spectrum options available to carriers and their customer alike, the SpotCell1000 is designed to support four bands in a single product.

The explosive growth of wireless data has lead to exponential demand for cost effective coverage solutions for all ends of the market. No more so than for the small commercial applications that increasingly rely on mobile are frustrated by unpredictable coverage.

The SpotCell 1000 introduces carrier compliant solutions that address this market more cost effectively than solutions available today.

"Oh, 4G? Yes, we support that too!"

Zinwave 3000 is an in-building wireless system that is completely standards-agnostic offering reliable in-building wireless coverage from 150MHz to 2700MHz on one hardware layer. Any Zinwave 3000 system is therefore automatically compatible LTE at any frequency, with no need for building-owners to outlay for expensive new equipment to support the new standard.

In China alone, the majority of 2G and 3G traffic occurs indoors, a trend expected to continue with 4G. When operating at higher frequencies, higher-bandwidth mobile standards have greater difficulty penetrating buildings through commonly used materials. Zinwave's strategy is to put optimum coverage and capacity where the usage is. Building owners and telecom operators who have had the foresight to install a Zinwave 3000 wideband active DAS system no longer need to undertake expensive upgrades for this reason Zinwave's solution has proven enormously popular all across Asia!
