

### Wavion Wireless Networks & Crossover Distribution Agreement

Jan 25, 2012 – Crossover Distribution and Wavion Wireless Networks signed a distribution agreement early this month.

Wavion, a Wi-Fi technology leader, is a market forerunner in metro and rural wireless solutions. The products offered by Wavion provide end-to-end solutions including backhaul, CPEs, and management allowing carriers, service providers, governments and enterprises to deploy wireless networks quickly and effectively.

With higher capacity and greater coverage, Wavion antenna products add considerable value to Crossover's diversifying wireless portfolio.

### Feel FREE to Check Out SAF's All New FREEMILE 24 Outdoor Radio System!

SAF Tehnika, one of the world's top microwave carrier-class point-to-point radio manufacturers, has just released a new microwave radio system to ring in the New Year!

The FreeMile 24 all outdoor system is a new generation, license free, band radio for Ethernet packet data and E1 voice transmission. The unit highlights full duplex capacity, low interference, high availability, easy configuration, radio polarization and an RF Spectrum analyzer. The radio provides a trouble-free experience for users with its web browser-based management interface, and simple installation process – in fact, [CLICK HERE](#) for a YouTube instructional video!

### Adept...Powerful...Compelling... Descriptive Words for Deliberant's All New APC Series!

Deliberant is back with an all product line, the APC Series, ideal for last mile connectivity. The wide range of products operate in the unlicensed, 2.4 and 5 GHz frequencies, and can build long to short range point-to-point links.

The products use MiMo and SiSo technologies and include new features such as a newer and extremely fast operating system, and iPoll, among others. iPoll is an extremely efficient point-to-multipoint protocol which eliminates mediated access, and enables maximum bandwidth. All APC Series devices have an integrated spectrum analyzer to provide graphical signal representation, and are tested against harsh weather.

### Wi-Fi, Wi-Not?

Thought the 3G HUB from your carrier would resolve all your high speed issues? Not always! Depending on your location and distance from a carrier tower, you may experience low signal levels, BUT, there is a solution...

Crossover has an external antenna program for specific low-signal requirements. Each will work regardless of which HUB you purchased, or your reception level.

To become a 3G HUB dealer visit our website and click the "Partner Login" at the top right and create a new account. After you complete all mandatory fields, and receive the "New Account Set-up Confirmation Email" from Crossover, you are free to purchase or view the antenna kits! Crossover also has a list of certified installation partners if you require assistance with the antenna.
